Complete antimicrobial product series

DOMUS. We believe it, we do it!

Since 2017 Domus is the leader in the antimicrobial treatment of the EURO handles. Now Domus, responding to the needs of today's reality, launches the «New Domus Antimicrobial Era», with a complete antimicrobial product series, which includes all its premium products, such as the X-100 Tilt and Turn Mechanism, Cremon for Opening Windows, DSL61 Door Handles, EURO Door Handles, DSL Locks, D-FENDER and WK+ Extra Safety Lock .

It is a great opportunity for you to encourage your customer, manufacturer or end- consumer, to use a product to protect themselves from germs for a lifetime! These are the products that are more relevant than ever to our era and in addition you will be the first to promote such products to your clientele. Moreover, to my personal reassurance, I also include the **certificate** that confirms the effectiveness of our new products against germs.

Furthermore, we are pleased to announce that from this year Domus is a member of the Initiative ELLA-DIKA MAS. A family consisting of Greek, extroverted, productive-processing companies, which envisions a Greece that innovates, produces and exports. And we are extremely proud of that, especially now that the Greeks are proving how much we can achieve together!

> HANTS RG27 8DH UK

Now is the time for all of us, with optimism and hard work, to face the challenges of the next day.

Best regards,

John Kounelis

What happens WITHOUT the antimicrobial treatment?

The microbes (micro – bio) or bacteria, from their nature, live and die in a short period of time. Although, they have a very short life, the bacteria are multiplying at much greater rate (exponentially). For example, by touching with our hands the handle we can infect it with almost 1.500.000 bacteria which are multiplying and almost reach 20.000.000 in 24 hours (while the first 1.500.000 germs have already died).

What happens WITH the antimicrobial treatment?

The antimicrobial treatment with the technology of silver ions suspends the development of the bacteria up to 99.9% by preventing the cell division and as a result the germs CAN NOT multiple. The antimicrobial treatment lasts for a lifetime and cannot be affected by cleaning products, such as bleach.
